

Action Plan

Where do I want to be by the end of this period/year?

What do I want to be doing? (Include as many learning needs as required to achieve agreed objectives)

What do I want/need to learn?	What do I have to do to achieve this?	What resources or support will I need?	How will I measure success?	Target dates for review and completion
Putting my Python skills into practice by learning to make web pages using a Python web framework (Django)	Learning Django through taking online short courses. Set up my own project based upon Django which will be a web application based on rail systems (a personal interest of mine).	I will use the Linkedin Learning account I have access to. Support from peers who may have knowledge in this area.	I will create a working project using Django.	October 2021 – a personal project to complete by Autumn.
Develop a comprehensive understanding of JSON	Taking online courses	I will use the Linkedin Learning account I have access to. Support from peers who may have knowledge in this area.	A system I use at work accepts JSON to upload exam papers. I plan to make a small application using python to reduce the time it takes to upload these papers (i.e. to reduce me having to do a repetitive task).	October 2021 – a personal project to complete by Autumn.

- I have focussed on a limited number of goals as I feel that this makes me more likely to achieve them, rather than specify a larger number and achieving none. These goals will also help cement and develop the skills I have learned so far in this course.
